# Project Overview

Poseidon Poker combines features from current online poker platforms, with various crypto elements

**Wagering is in Stablecoin**

BTC/ETH/etc. auto-converted to stablecoin equivalent

**Fees are in \$POSEIDON**

Rakes/Buy-in use our USD-pegged, native currency

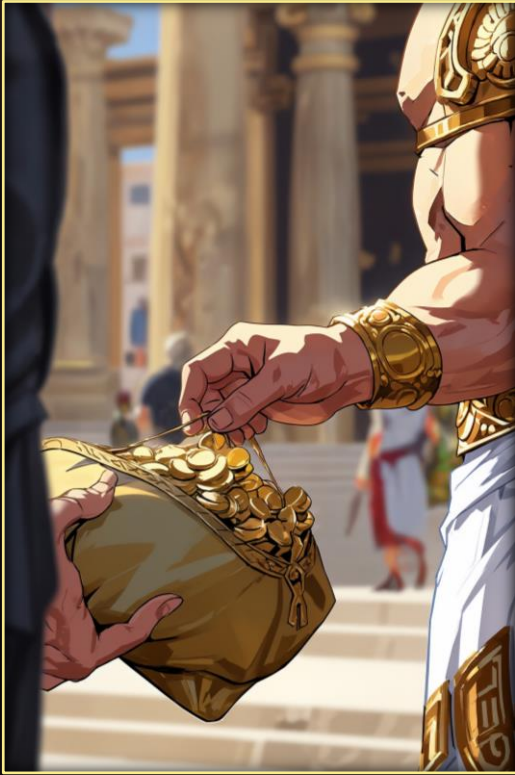

**NFTs with ACTUAL Use-Case**

Weekly tournaments, passive income, and much more...

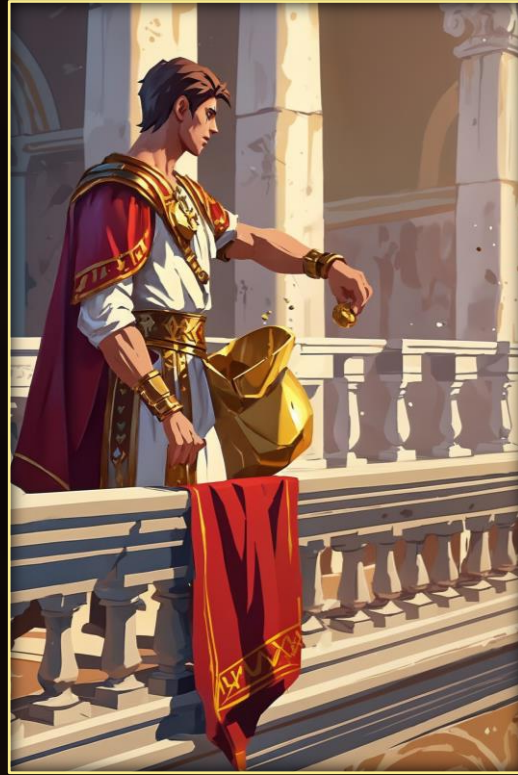

# Unique Mechanics

Poseidon Poker has several novel mechanics, making it unique from anything else ever seen on the market

**Token Trading Tax**  
Returned to Community

**Deflationary Token**  
Holders Rewarded

**Weekly Tournaments**  
For NFT Holders

**Godlike NFTs**  
Passive Income

# Token Trading Tax

Returned to Community

# Trading Tax

The **\$POSEIDON** smart contract includes a 4.5% buy/sell tax, coded to automatically re-distribute fees

## Mechanics

FOR THIS EXAMPLE:

1 USDT = 1 **\$POSEIDON**

Trading Tax

***Note:** Tax is applied when selling as well as buying \$POSEIDON. For illustrative purposes only. Example does not necessarily reflect future token price.*

## Distributions

2.5%

Weekly Tournament Prize Pools

1%

Godlike NFT Holders

1%

Team Wallet

When players deposit **\$POSEIDON** to the app, they'll receive a bonus 4.5% to counteract the trading fee. This means that speculative trading is taxed, whereas users are not.

# Deflationary Token

Holder's Rewarded

# Deflationary Tokens

Deflationary tokens are a type of crypto where the total supply shrinks over time, adding value for holders through scarcity

## Case Study

**8% of every transaction burned**  
(sent to the "Dead" Wallet)

**Initial Total Supply**  
**1,000,000,000,000,000** (1 trillion)

**Current Total Supply**  
**464,846,384,206,124** (464.8 billion)

So if you owned **1%** (10 billion) of the total the supply at launch, this would currently be **2.15%** of the current total supply.

**Deflationary tokens encourages and rewards long-term holders and reduces swing-trading!**

# \$POSEIDON Fees Burned

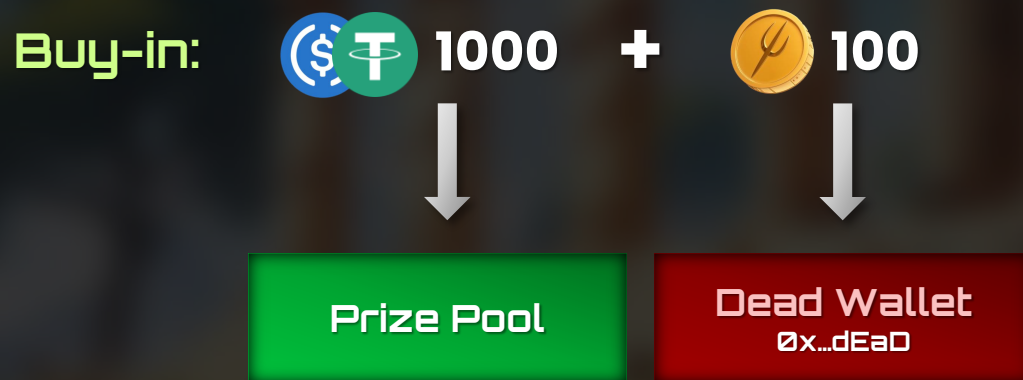

Players use \$POSEIDON for tournament buy-ins and rake, **ALL** of which is sent directly to the dead wallet

## Burn Mechanism

FOR THIS EXAMPLE:

1 **USDT** = 1 **\$POSEIDON** & Buy-in Fee = 10%

**\$1000 Tournament**

## Pegged To Buy-In

\$POSEIDON fees are always 10% of buy-in, regardless of price

**\$1000 Tournament**

if \$POSEIDON price = \$1

Buy-in:  1000 +  100

if \$POSEIDON price = \$2

Buy-in:  1000 +  50

Note: For illustrative purposes only. Example does not necessarily reflect future token price or entry-fees.

# Estimated ROI

For this analysis, [dextools.io](https://dextools.io) was scanned for the highest 24h trading-volume token

## Case Study

100% RANDOM TOKEN WITH ZERO AFFILIATION TO OUR PROJECT. EXAMPLE ONLY!

## Summary

Godlike NFT Taxes Raised:	\$115,900
NFT Purchase Cost:	\$2,500
Reflections Paid Per NFT:	\$1,159

## Est. ROI

24h Trading Volume	\$11,590,000
4.5% Trading Fees	\$521,550
2.5% Tourn. prize pool	\$289,750
1% Godlike NFTs	\$115,900
1% Team Wallets	\$115,900

ROI:	2.15 days
20% Vol:	10.75 days

**NOTE:** Calculations are determined using data from a random time point on DexTools. While no two projects are comparable, the example token is a memecoin – something with little actual value, other than the hype generated. Comparatively, \$POSEIDON will be linked to a functioning poker app and built-up alongside proper marketing. Therefore, we believe this ROI is within the realm of possibility.
